INHERITANCE GENETICS

# Module map

- Module 09: Inheritance Genetics
- Connected lab: lab-10_inheritance-genetics.md
- Use this deck as the visual path through the module's evidence and retrieval work.

## Module 09
Inheritance Genetics

1. Alleles and genotype
2. Mendelian patterns
3. Punnett-square prediction
4. Beyond simple dominance
5. Pedigrees and probability

**Lab evidence**
lab-10_inheritance-genetics.md

**Teaching note:** Open by naming the module claim and pointing students to the lab as the evidence surface.

INHERITANCE GENETICS

# Learning objectives

- Distinguish gene, allele, genotype, and phenotype.
- Use segregation to explain monohybrid inheritance.
- Build and interpret Punnett-square probabilities.
- Recognize inheritance patterns beyond complete dominance.
- Use pedigree evidence to reason about traits.

**OBJECTIVE 1**
Distinguish gene, allele, genotype, and phenotype.

**OBJECTIVE 2**
Use segregation to explain monohybrid inheritance.

**OBJECTIVE 3**
Build and interpret Punnett-square probabilities.

**OBJECTIVE 4**
Recognize inheritance patterns beyond complete dominance.

**OBJECTIVE 5**
Use pedigree evidence to reason about traits.

**Teaching note:** Frame objectives as actions students should be able to perform, not facts to copy.

INHERITANCE GENETICS

# Topic sequence

- Alleles and genotype: Alleles are gene variants that contribute to genotype and phenotype.
- Mendelian patterns: Mendelian inheritance predicts patterns when alleles segregate into gametes.
- Punnett-square prediction: Punnett squares model probability, not guaranteed outcomes.
- Beyond simple dominance: Incomplete dominance, codominance, polygenic traits, and environment complicate simple patterns.
- Pedigrees and probability: Pedigrees use family evidence to infer inheritance patterns.

01

**Alleles and genotype**

Alleles are gene variants that contribute to genotype and phenotype.

02

**Mendelian patterns**

Mendelian inheritance predicts patterns when alleles segregate into gametes.

03

**Punnett-square prediction**

Punnett squares model probability, not guaranteed outcomes.

04

**Beyond simple dominance**

Incomplete dominance, codominance, polygenic traits, and environment complicate simple patterns.

05

**Pedigrees and probability**

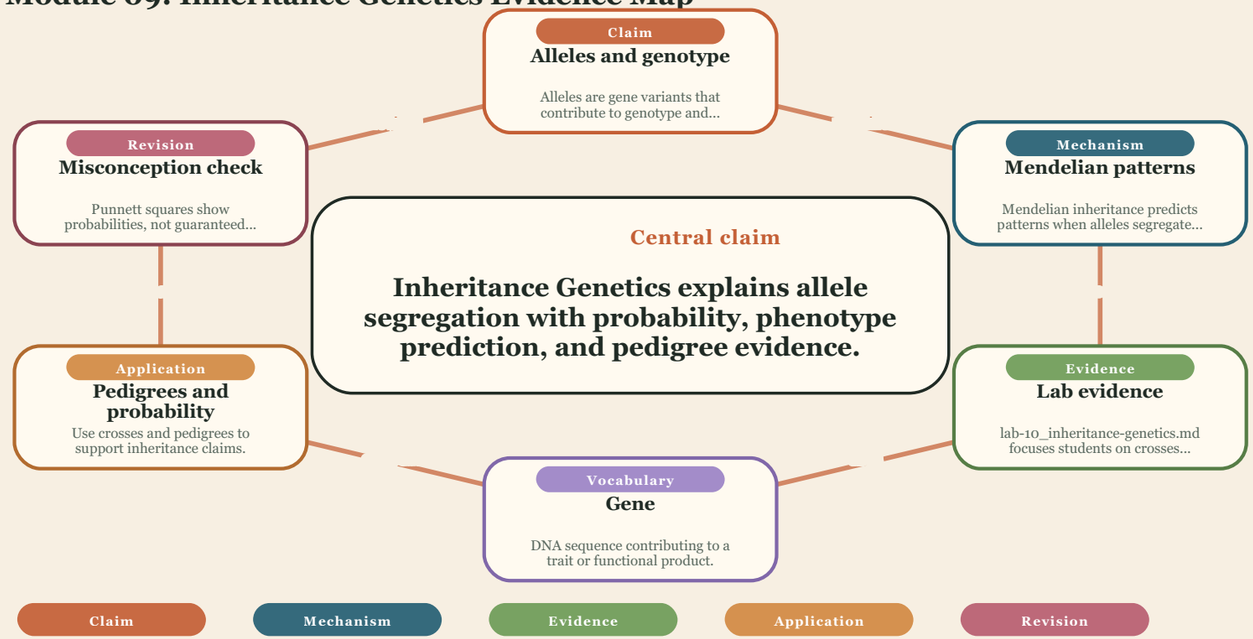

Pedigrees use family evidence to infer inheritance patterns.

**Teaching note:** Show the module as an ordered explanation so students can locate each new idea.

INHERITANCE GENETICS

# Module 09: Inheritance Genetics Evidence Map

- Module focus: Inheritance Genetics
- Central claim: Inheritance Genetics explains allele segregation with probability, phenotype prediction, and pedigree evidence.
- Key nodes to connect: Alleles and genotype, Mendelian patterns, Lab evidence
- Reasoning move: use 'requires' to explain relationships, not memorize terms.
- Lab connection: lab-10_inheritance-genetics.md supplies an evidence surface for the map.

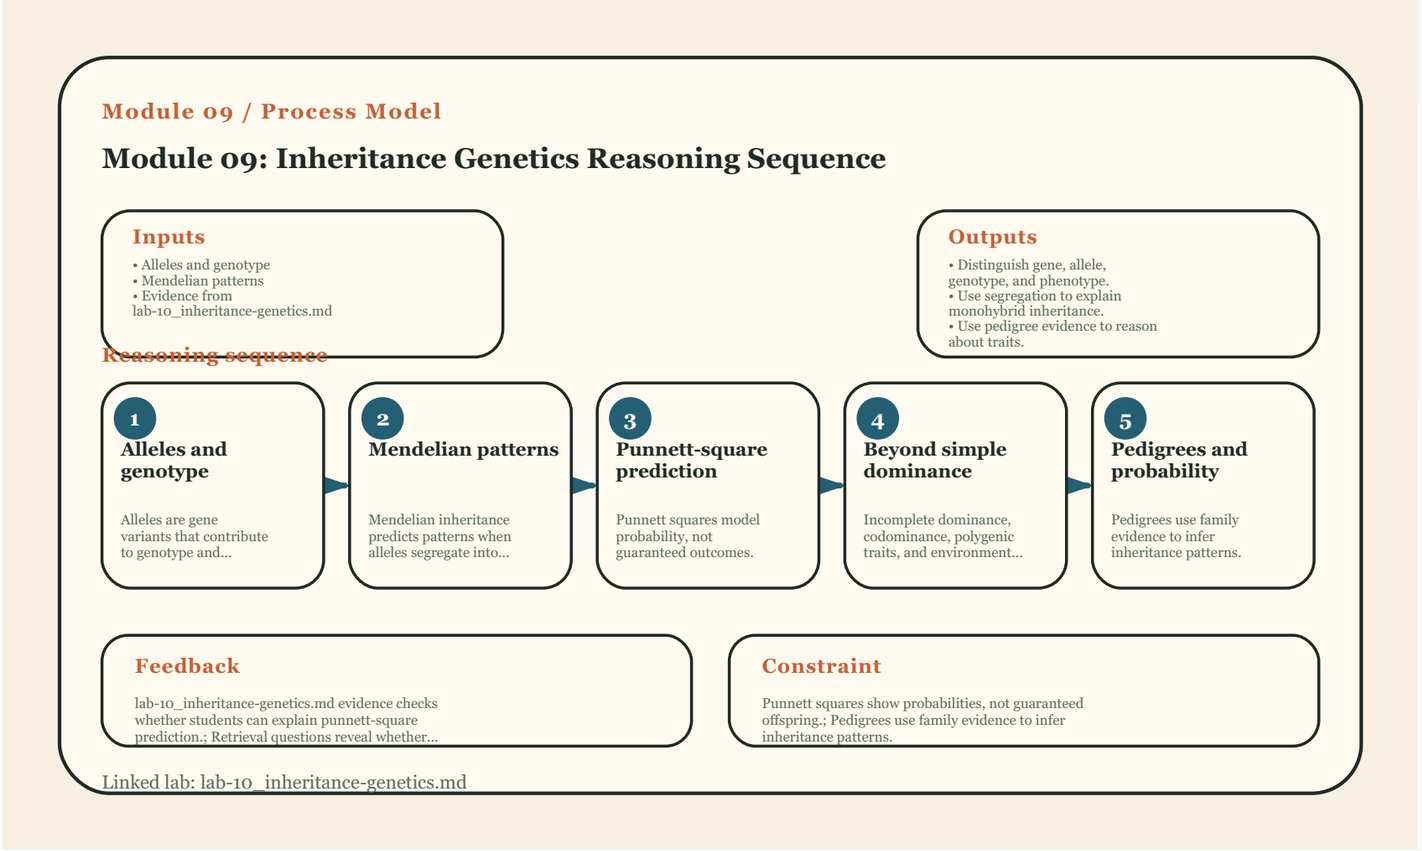

**Teaching note:** Ask students to explain one edge in their own words before moving on.

INHERITANCE GENETICS

# Module 09: Inheritance Genetics Reasoning Sequence

- Module focus: Inheritance Genetics
- Trace the model: Alleles and genotype -> Mendelian patterns -> Punnett-square prediction -> Beyond simple dominance
- Inputs become outputs: Alleles and genotype, Mendelian patterns -> Distinguish gene, allele, genotype, and phenotype., Use segregation to explain monohybrid inheritance.
- Feedback check: lab-10_inheritance-genetics.md evidence checks whether students can explain punnett-square prediction.
- Lab connection: lab-10_inheritance-genetics.md gives students a process to observe or test.

**Teaching note:** Emphasize where the process can fail, slow down, or be revised by evidence.

INHERITANCE GENETICS

# Terms as evidence handles

- Gene: DNA sequence contributing to a trait or functional product.
- Allele: Variant form of a gene.
- Genotype: Allele combination of an organism.
- Phenotype: Observable trait or characteristic.
- Dominant: Allele effect visible with one copy in simple dominance.
- Recessive: Allele effect masked by dominant allele in heterozygotes.

**GENE**
DNA sequence contributing to a trait or functional product.

**ALLELE**
Variant form of a gene.

**GENOTYPE**
Allele combination of an organism.

**PHENOTYPE**
Observable trait or characteristic.

**DOMINANT**
Allele effect visible with one copy in simple dominance.

**RECESSIVE**
Allele effect masked by dominant allele in heterozygotes.

**Teaching note:** Treat terms as handles for reasoning. Each term should help explain a claim or observation.

INHERITANCE GENETICS

# Lab connection

- Lab file: lab-10_inheritance-genetics.md
- Lab evidence should test or illustrate: Punnett-square prediction
- Students should leave with a concrete observation, comparison, or model tied to the module claim.

**QUESTION**
Alleles and genotype

**EVIDENCE**
lab-10_inheritance-genetics.md

**CLAIM**
Distinguish gene, allele, genotype, and phenotype.

**Teaching note:** Make the lab connection explicit before students encounter the activity.

INHERITANCE GENETICS

# Contrast check

- Do not stop at: Alleles are gene variants that contribute to genotype and phenotype.
- Stronger explanation: Pedigrees use family evidence to infer inheritance patterns.
- The goal is to move from a named idea to a testable biological explanation.

**SURFACE**

Alleles are gene variants that contribute to genotype and phenotype.

**DEEPER**

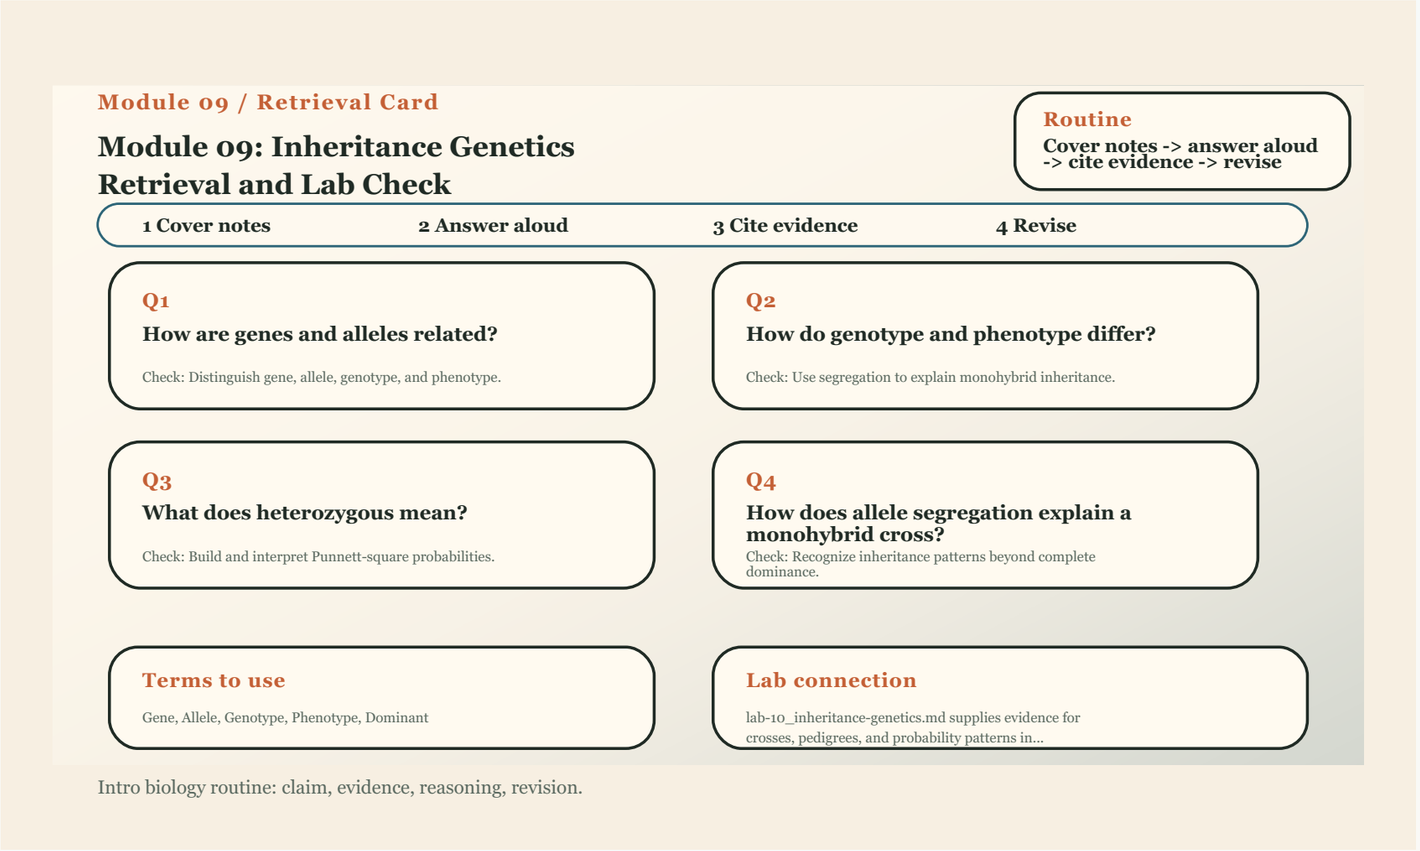

Pedigrees use family evidence to infer inheritance patterns.

**Teaching note:** Use this slide to prevent shallow vocabulary-only learning.

INHERITANCE GENETICS

# Module 09: Inheritance Genetics Retrieval and Lab Check

- Module focus: Inheritance Genetics
- Retrieval prompt: How are genes and alleles related?
- Answer check: Distinguish gene, allele, genotype, and phenotype.
- Required terms: Gene, Allele, Genotype
- Lab connection: lab-10_inheritance-genetics.md; lab-10_inheritance-genetics.md supplies evidence for crosses, pedigrees, and probability patterns in inheritance.

Intro biology routine: claim, evidence, reasoning, revision.

**Teaching note:** Pause here. Students answer first without notes, then compare to the checks.

INHERITANCE GENETICS

# Practice quiz bridge

- 1. An organism's genotype is its:
- 2. Two heterozygotes are crossed (Aa x Aa). What fraction of offspring are expected to show the recessive trait?
- 3. A heterozygote (Aa) shows the dominant trait because:
- 4. What is a pedigree used for?

**QUESTION 1**

**Key: C**

An organism's genotype is its:

**QUESTION 2**

**Key: A**

Two heterozygotes are crossed (Aa x Aa). What fraction of offspring are expected to show the recessive trait?

**QUESTION 3**

**Key: D**

A heterozygote (Aa) shows the dominant trait because:

**QUESTION 4**

**Key: B**

What is a pedigree used for?

**Teaching note:** Use the quiz as formative feedback. Answer key: 1=C, 2=A, 3=D, 4=B

INHERITANCE GENETICS

# Synthesis and exit ticket

- Exit claim: explain alleles and genotype using evidence from lab-10_inheritance-genetics.md.
- Must include: Gene, Allele, Genotype.
- Revision prompt: what evidence would change your explanation?

**CLAIM**
Alleles and genotype

**EVIDENCE**
lab-10_inheritance-genetics.md

**REVISION**
What would change your mind?

**Teaching note:** End with a claim-evidence-reasoning exit ticket connected to the same module data.
