

Module 10: Epigenetics - Learning Questions

1. Why do cells regulate genes?
2. How can two cells with the same DNA act differently?
3. What is DNA methylation?
4. How can chromatin structure affect transcription?
5. How is epigenetics different from mutation?
6. What environmental factors can influence expression?
7. Why should epigenetic claims be made carefully?
8. How can gene regulation affect phenotype?
9. What evidence would show expression changed without mutation?
10. How does epigenetics connect molecular biology to traits?
