

Module 7: Molecular Genetics - Learning Questions

1. How does DNA structure store information?
2. Why does complementary base pairing matter?
3. What does semiconservative replication mean?
4. How is transcription different from translation?
5. What does a codon specify?
6. How do ribosomes participate in protein synthesis?
7. How can a mutation change a protein?
8. Why do some mutations have no visible effect?
9. How does gene expression connect genotype to phenotype?
10. What evidence would show that a gene is being expressed?
