

Module 2: Basic Chemistry - Learning Questions

1. How do protons, neutrons, and electrons differ?
2. Why do electrons matter for chemical bonding?
3. What distinguishes covalent, ionic, and hydrogen bonds?
4. Why does water dissolve salt but not all nonpolar molecules?
5. How does polarity explain water cohesion?
6. What does a low pH mean about hydrogen ions?
7. Why are buffers important in living systems?
8. How are atoms conserved during chemical reactions?
9. How can chemical shape affect biological function?
10. What evidence would show that a substance is acidic or basic?
