

Module 6: Metabolism - Learning Questions

1. How do the laws of thermodynamics constrain cells?
2. Why is ATP useful for cellular work?
3. How do enzymes lower activation energy?
4. Why does enzyme shape matter?
5. How can temperature or pH change enzyme function?
6. What is the difference between competitive and noncompetitive inhibition?
7. How are photosynthesis and respiration related?
8. Where does matter move in the photosynthesis-respiration cycle?
9. Where does energy enter and leave biological systems?
10. What evidence would show that an enzyme is denatured?
