

Module 11: Genomics and Biotechnology - Learning Questions

1. What is a genome?
2. Why does genomics require comparison?
3. What does PCR amplify?
4. Why are primers necessary?
5. How does gel electrophoresis separate DNA fragments?
6. Why do smaller fragments move farther in a gel?
7. What can CRISPR do in general terms?
8. How is a GMO defined in biotechnology?
9. What evidence should support a biotechnology claim?
10. What ethical questions can biotechnology raise?
