

Module 3: Organic Molecules - Learning Questions

1. Why can carbon make many different biological molecules?
2. How are dehydration synthesis and hydrolysis opposite processes?
3. What distinguishes a monomer from a polymer?
4. How do carbohydrates and lipids differ in structure and function?
5. Why are phospholipids useful in membranes?
6. How does amino acid order influence protein shape?
7. What can denature a protein?
8. How do DNA and RNA store information?
9. How can a molecule be both structural and informational?
10. Which evidence would show that a protein lost its function?
